Introduction

What is a Station Travel Plan?

The Department for Transport defines as Station Travel Plan as: *'A strategy for managing the travel generated by your organisation, with the aim of reducing its environmental impact, typically involving support for walking, cycling, public transport and car sharing'*

TransPennine Express maintains Station Travel Plans for all 19 stations where they are currently the Station Facility Owner (SFO).

Why Develop a Station Travel Plan?

Demand for rail continues to grow, with more and more people choosing to travel by rail each year. It is predicted that within the next 30 years demand for rail will more than double. TransPennine Express is at the heart of this growth, with double digit percentage growth in passenger journeys year on year, with a doubling of customer numbers since the franchise was established in 2004.

With growth of this magnitude, it is important that alongside investing in new trains, operating more services and enhancing the customer experience, we are considerate of how customers travel to and from the station to access the railway network.

Against the landscape of a changing culture towards private transport, with many millennials choosing not to own a car, and instead adopt solutions such as Uber, dockless bike hire and car sharing schemes, a station travel plan allows operators to identify the developments which are required to keep pace with society. It also allows us to identify key areas of change, with the evident shift from internal combustion to electric cars and hybrids, we are able to set out plans for providing the infrastructure to support this shift.

We will use the Station Travel Plan as a tool to identify and document opportunities to improve intermodal access and promote sustainable travel, informed by data from the National Rail Passenger Survey and our own shadow survey, from which we can evaluate customer satisfaction with our developments as we strive to offer a seamless and sustainable solution for all customers door to door journeys, paying particular attention to the scores for:

- Connections with other forms of transport
- Car parking
- Cycle Parking
- Method of transport used to access the station

Process

The development of our Station Travel Plans is led by TransPennine Express, with a commitment to produce and maintain Station Travel Plans for each of the 19 stations which the franchise manages. The plan will be reviewed in full each year, but is intended to act as a live document with updates made throughout the year as projects are delivered and changes realised.

The Accessibility and Integration Manager is responsible for the production and upkeep of the Station Travel Plans, and will consult with relevant Stakeholders at each stage of the production of the plan. This group is likely to be comprised of representatives from the Local Authority, user groups, community rail partnerships, TOCs and other transport operators.

The following process will be undertaken in the production and revision of the plan:

Step 1: Site Audit

A tour of the station and surrounding area will be carried out to gain an understanding of the existing facilities. There will be a number of fact finding visits, followed up by an accompanied visit with stakeholders to confirm details. This will form a base upon which any improvements will be measured.

Step 2: Analysis

- Review of the latest NRPS data with interrogation of statistics for 'Connections with other forms of public transport' and 'Facilities for car parking'.
- Review of the latest Shadow NRPS data with interrogation of statistics for 'Connections with other forms of public transport' and 'Facilities for car parking'.
- Review of Customer Relations data to identify any trends with regards station access.
- Review of commercial data for car parking, sales of multi-modal tickets (where available)

Step 3: Aims, Objectives and Targets

SMART objectives will be determined and agreed with the aim of delivering improvements based upon the findings of the analysis and site audit.

Step 4: Action Planning

Specific tasks and timescales will be applied in order to achieve the agreed objectives.

Step 5: Implementation and Delivery

The action plan will be implemented within the specified timescales. Where required, funding will be sought from all available sources. Where actions are aligned to other business plan actions, the requirements may be combined to deliver efficiencies.

Step 6: Monitoring and Refinement

The actions will be frequently reviewed against target to ensure that progress is being made. The Station Travel Plans will be reviewed and updated annually to ensure they are relevant and continue to drive improvement.

Stakeholders

General

Rail North

Rail North works with the Department for Transport, Local Transport Authorities and other bodies to specify and deliver high-quality rail services across the north of England, including being involved in the specification and management of the Northern and TransPennine Express franchises.

Rail North's Long-Term Rail Strategy for the North of England (2015) concentrates on four main areas:

- Better Connectivity, with targeted improvements to journey times, service frequencies and improved connections to make end-to-end journey times quicker.
- A more Coherent and user-friendly network: a network with the visible coherence of the London Underground delivered over the North's wide geography. This needs defined categories of train services as well as planning the North's many routes to operate together as a single whole with a single simplified fares structure.
- Increased Capacity, both on-train so that passengers do not experience excessive overcrowding and on-track so additional demand for economically worthwhile passenger and freight movements can be accommodated.
- Cost effectiveness. As use of the North's rail services grows, running costs per passenger and tonne of freight carried need to fall. The key to achieving this is investment.

Rail Delivery Group

Set up after privatisation in 1993, the Association of Train Operating Companies (ATOC) brings together all train companies to preserve and enhance the benefits for passengers of Britain's national rail network. A recent change to Rail Delivery Group brings with it a new mission statement:

"Enabling rail companies to succeed by delivering a successful railway"

The purpose of the Rail Delivery Group (RDG) is to enable passenger and freight operators and Network Rail to succeed by delivering better services for their customers. This ultimately benefits taxpayers and the economy. Their work is focused on four transformational portfolios:

- Today's railway - improving punctuality, reliability and value for money
- Customer experience - modernising ticketing and improving door-to-door journeys
- Industry reform - improving industry structures to enable excellence
- Tomorrow's railway - better planning for the railway's future

Sustrans

Sustrans are a national charity helping to make travel by foot, bike or public transport more popular for everyday journeys. They work across communities, with policy-makers and other organisations to help people choose healthier, cleaner and cheaper journeys, contributing to better places and spaces to move through and live in.

Their vision is that by 2020 80% of local journeys will be made by bike, foot or public transport, double the current figure of 40%. Improving the accessibility of TPE's railway stations can clearly help reduce the need to travel by car and increase the proportion of journeys undertaken using more sustainable modes.

Sustrans works to develop the National Cycle Network, which is series of safe, traffic-free paths and quiet on-road cycling and walking routes that connect to every major town and city. The Network passes within a mile of half of all UK homes and now stretches over 14,000 miles across the length and breadth of the UK.

Stakeholders

Specific

Local Authority

North East Lincolnshire Council

The council have produced a Local Transport Plan, which sets out the vision, policies, strategies and priorities for the improvement of highways, access and connectivity of the local transport system in North East Lincolnshire.

It runs from April 2011 and covers an initial period of 15 years. It is designed to set out the role of transport, access and connectivity in delivering the overarching economic, social and environmental policies within North East Lincolnshire in addition to meeting existing highway commitments.

In addition to undertaking our statutory responsibilities as a Local Transport Authority, the LTP3 is geared towards the specific regeneration projects which have been identified as crucial to the region's future. These include:

- The generation of quality jobs in port activities, logistics and industry along in Immingham and along the South Humber Bank.*
- Redeveloping Grimsby Town Centre as a centre for commerce and retail.*
- Creating a vibrant and successful visitor resort in Cleethorpes.*
- Attractive, mixed commercial and residential uses along Freeman Street.*
- New homes and associated services in the East Marsh Housing Renewal Area.*

To ensure that the infrastructure supports these projects, North East Lincolnshire council have, together with their stakeholders, devised eight Local Transport Challenges. The challenges are to:

- Enable sustainable growth through effective transport provision.*
- Improve journey times and reliability by reducing congestion.*
- Support regeneration and employment by connecting people to education, training and jobs.*
- Enable disadvantaged groups or people living in disadvantaged areas to connect with employment, healthcare, social and leisure opportunities.*
- Improve the health of individuals by encouraging and enabling more physically active travel.*
- Provide safe access and reduce the risk of loss, death or injury due to transport accidents or crime.*
- Improve the journey experience on the local transport network.*
- Ensuring that transport contributes to environmental excellence, including managing air quality and reducing transport-related greenhouse gas emissions.*

Train Services

Cleethorpes is the terminus station for the south TransPennine Express route, connecting the coastal towns with Doncaster and Sheffield, continuing through to Manchester airport.

Timetables can be found at www.tpexpress.co.uk/travel-updates/timetables

Cleethorpes is a seaside resort located on the estuary of the Humber river in North East Lincolnshire. The main industry for the town is tourism, having been established as a resort in the 19th century.

The population of Cleethorpes is estimated at around 40,000.

The station is located a short walk from the town centre, and is conveniently placed for access to the promenade and pier. This makes the train a popular choice for families in the summer travelling to the seaside.

There are a number of tourist attractions within Cleethorpes, and most of these are accessible by walking from the station, or using local bus services.

Cycling

Cycle Routes

Overview

National Cycling Route 1

This route runs the length of the UK from Dover to the Shetland Islands via the east coast of England and Scotland. Covering a distance of 1695 miles, made up of a mixture of on road and traffic free sections, this also forms part of the Euro-Velo 12 route which runs through Norway and Holland.

The route is split into 12 sections, with section 4 being the closest to Cleethorpes.

Section 4 – Hull to Fakenham

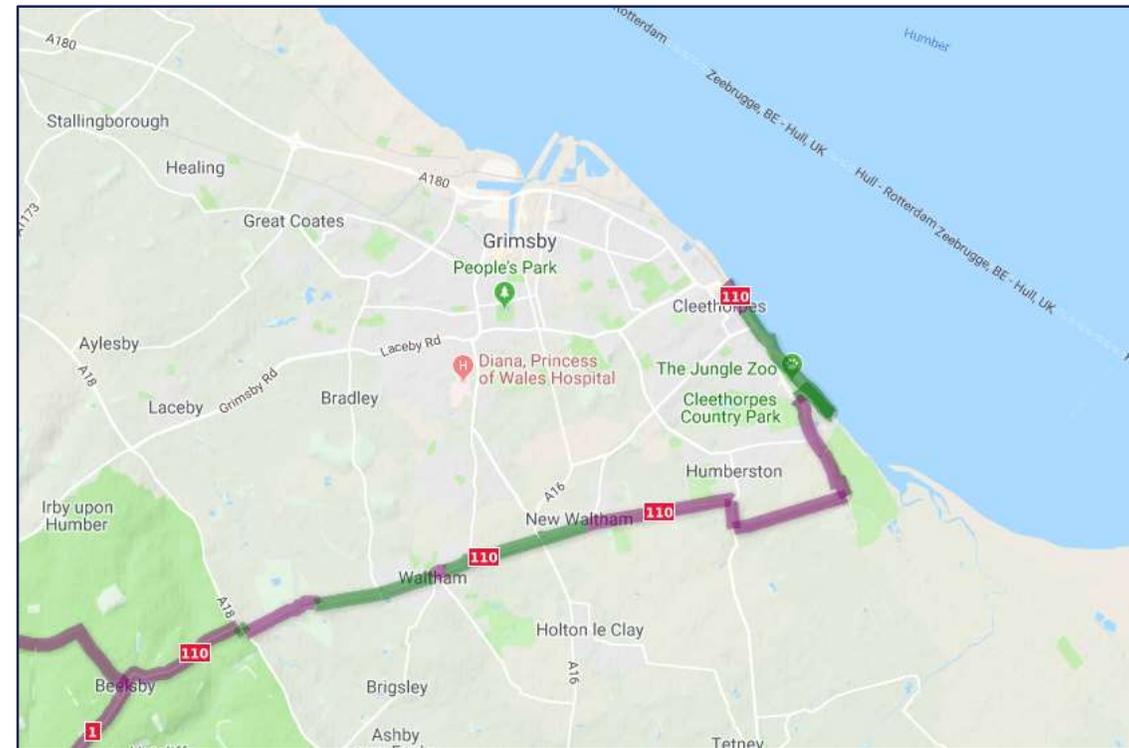

Route 1 passes within 10 miles of the station. There is currently no specific cycling link from the station to route 1, with cyclists being required to make use of the road network to make this journey.

Near the Station

Locally, routes have been consolidated and the 110 route now provides a continuous link from the coast to Route 1, concluding just before the railway station on the promenade.

Cycling

Cycle Parking

Overview

In early 2019, Cleethorpes station will benefit from a new cycle hub, developed in the former ticket office, with secure cycle storage, repairs, servicing and hire. This will be an invaluable asset to the station, and will hopefully see demand for cycle parking at the station grow.

The current provision will remain in addition to the new hub, offering convenient cycle parking on the station concourse.

Concourse

Spaces	12

Security	Covered by CCTV
Weather Protection	Station Canopy
Utilisation	TBC

Walking

Pedestrian Access

Overview

There is good pedestrian access to all sides of the station, with a large pedestrianised area which runs from Station Road and Grant Street to the promenade at the main entrance. There is stepped entry from the promenade to the station concourse, and level access from the car park.

There is pedestrian wayfinding signage on the promenade and at the top of the pedestrianised area leading to Station Road and Grant Street.

There are very few difficult crossing points. There is no dedicated pedestrian crossing from the station side of the promenade to the pier, but there are speed humps which create natural crossing points through traffic calming.

There is a zebra crossing on Grant Street for anyone accessing the station from Grant Street car park.

Public Transport

Bus Services

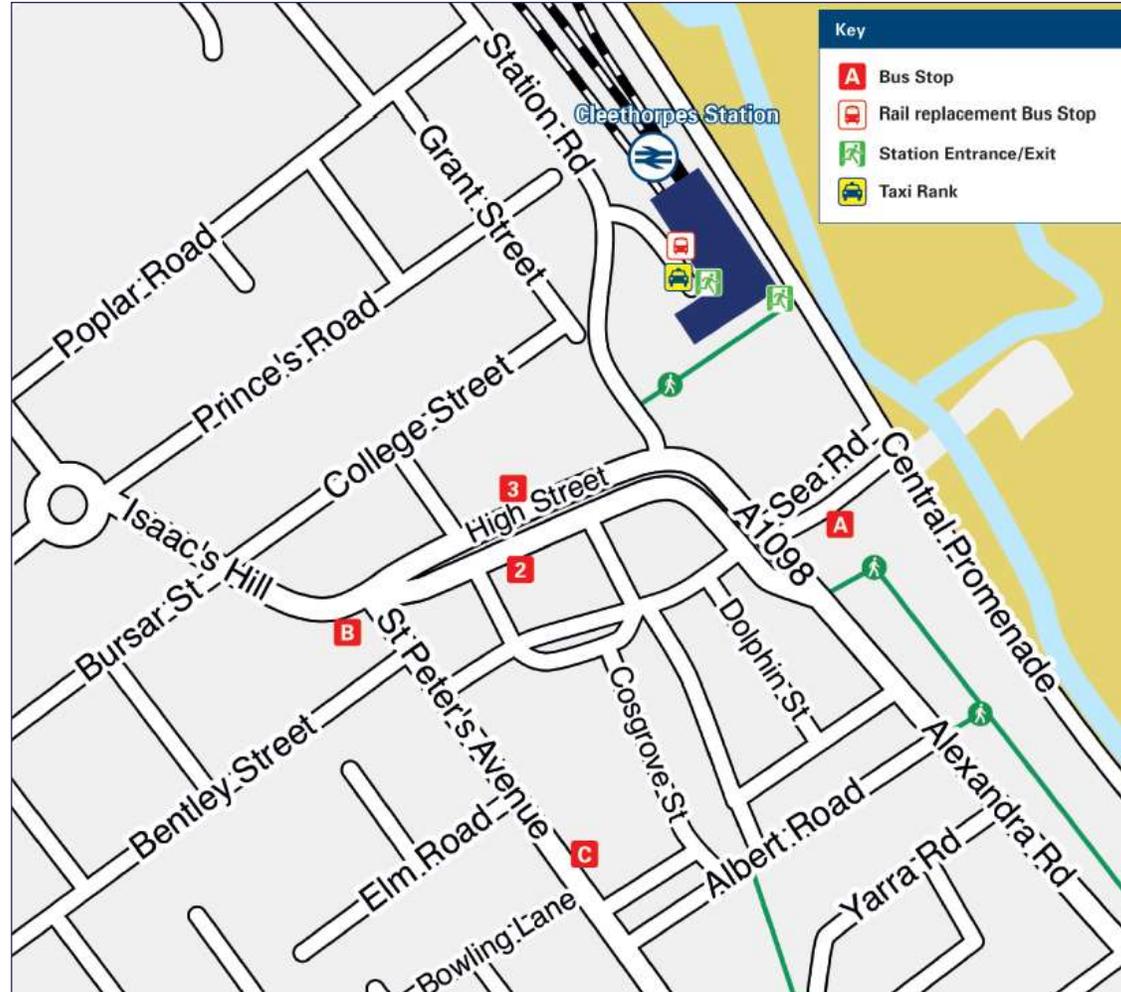

Overview

The closest bus stops to Cleethorpes Railway Station are located on the A1098 (High Street), which is the main road running through the town. There are also bus stops on Sea Road and Isacc's Hill, or slightly further away on St Peter's Avenue. They are all within walking distance of the station.

There is a ready supply of bus services linking to key parts of the town as well as to villages and local towns, including Grimsby, giving useful links to locals and tourists alike.

Road Access

Local Road Network

Overview

Cleethorpes has a good network of roads creating a grid as you approach the coast, meaning that alternative routes can quickly be used to link up with the main arterial routes further out of town.

Access to the station however is reliant upon the use of the A180, and passing through the town centre.

Access to the station car park requires vehicles to turn sharply, doubling back upon themselves, however visibility at this junction is good.

Road Network Map

Road Access

Car Parking

Overview

Car parking provision at Cleethorpes station is low, with a small car park at the station, and a small number of council and privately owned and managed car parks within the vicinity.

During 2019, TransPennine Express will seek to expand car parking capacity at the station by develop land beyond the former station building.

Customer Analysis

National Rail Passenger Survey

Connections with other forms of public transport

	Spring 2015	Autumn 2015	Spring 2016	Autumn 2016	Spring 2017	Autumn 2017	Spring 2018
TransPennine Express	78%	78%	71%	78%	79%	77%	83%
Long Distance	79%	78%	78%	80%	81%	81%	83%
Variance	-1%	0%	-7%	-2%	-2%	-4%	0%
Industry	74%	76%	75%	76%	79%	78%	78%
Variance	4%	2%	-4%	2%	0%	-1%	5%

There is a noticeable increase in the score for 'Connections with other forms of public transport' between 2017 and 2018. Responses to this question often capture customers opinions about the availability of connections with other train services, despite this being captured in a separate question. In December 2017, several timetable changes came into place across the North of England, offering new services and improved connectivity which likely affected this score. Similarly, development works at stations neared completion, delivering new facilities and opportunities for customers, again impacting this score.

Facilities for car parking

	Spring 2015	Autumn 2015	Spring 2016	Autumn 2016	Spring 2017	Autumn 2017	Spring 2018
TransPennine Express	50%	49%	46%	51%	48%	40%	50%
Long Distance	59%	58%	57%	61%	62%	58%	61%
Variance	-9%	-9%	-11%	-10%	-14%	-18%	-11%
Industry	49%	50%	48%	50%	50%	50%	48%
Variance	1%	-1%	-2%	1%	-2%	-10%	2%

This indicator incorporates a number of factors, and is built through responses to a set of questions relating to car park quality, costs and capacity. It is the latter of these which we believe is driving dissatisfaction. Car parking capacity has long been an issue for TransPennine Express, with growing footfall at constrained station sites, meaning the opportunities to expand car parking provision are minimal. It is expected that this score will continue to fall unless significant developments can be realised to create large new car parks close to the stations.

www.transportfocus.org.uk

Producers of the National Rail Passenger Survey and customer advocate.

Customer Analysis

Shadow National Rail Passenger Survey

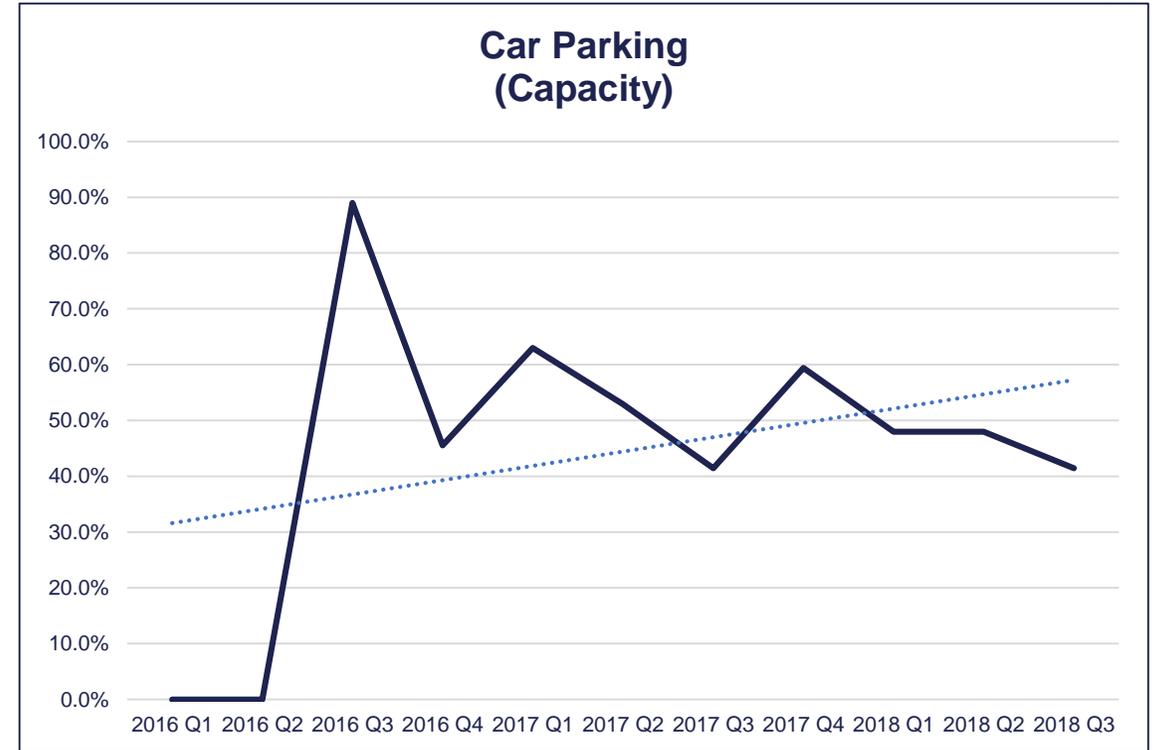

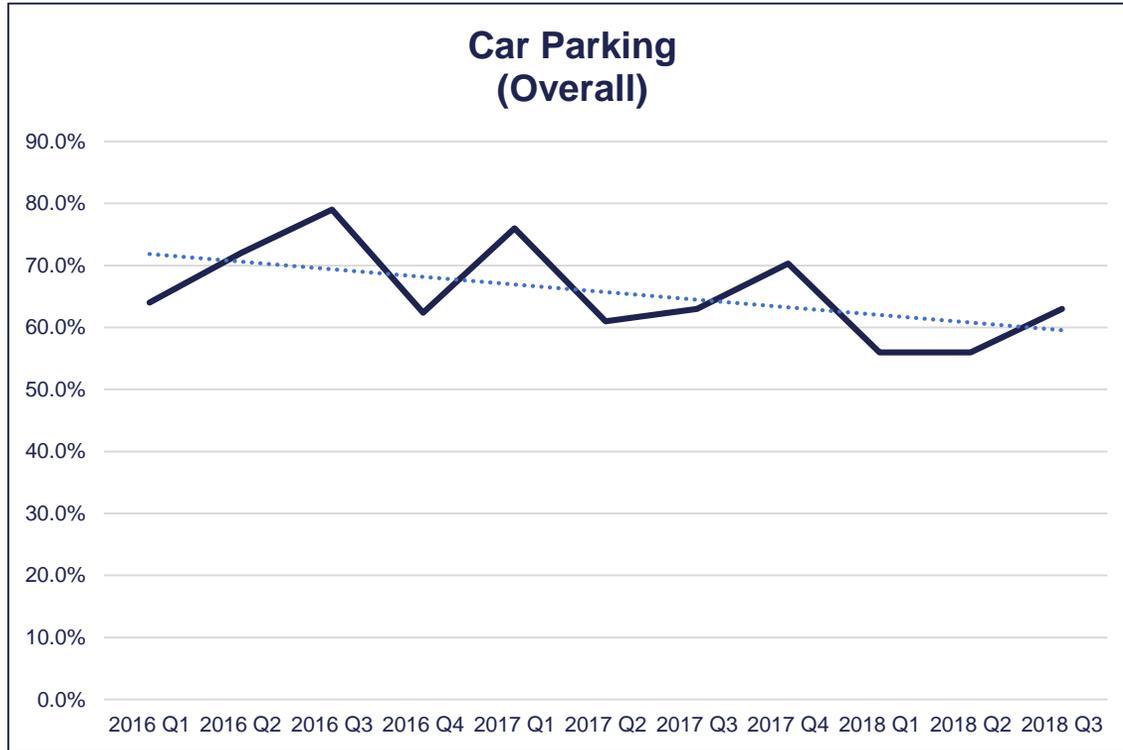

The sample size for Cleethorpes railway station is small, adding to the volatility of the scores.

Being a seaside town, the footfall at Cleethorpes station varies significantly between the seasons, and has an impact upon the method of transport used to access the station. For many visiting for the day, or a short break, walking is the preferred method.

Customer Analysis

Shadow National Rail Passenger Survey

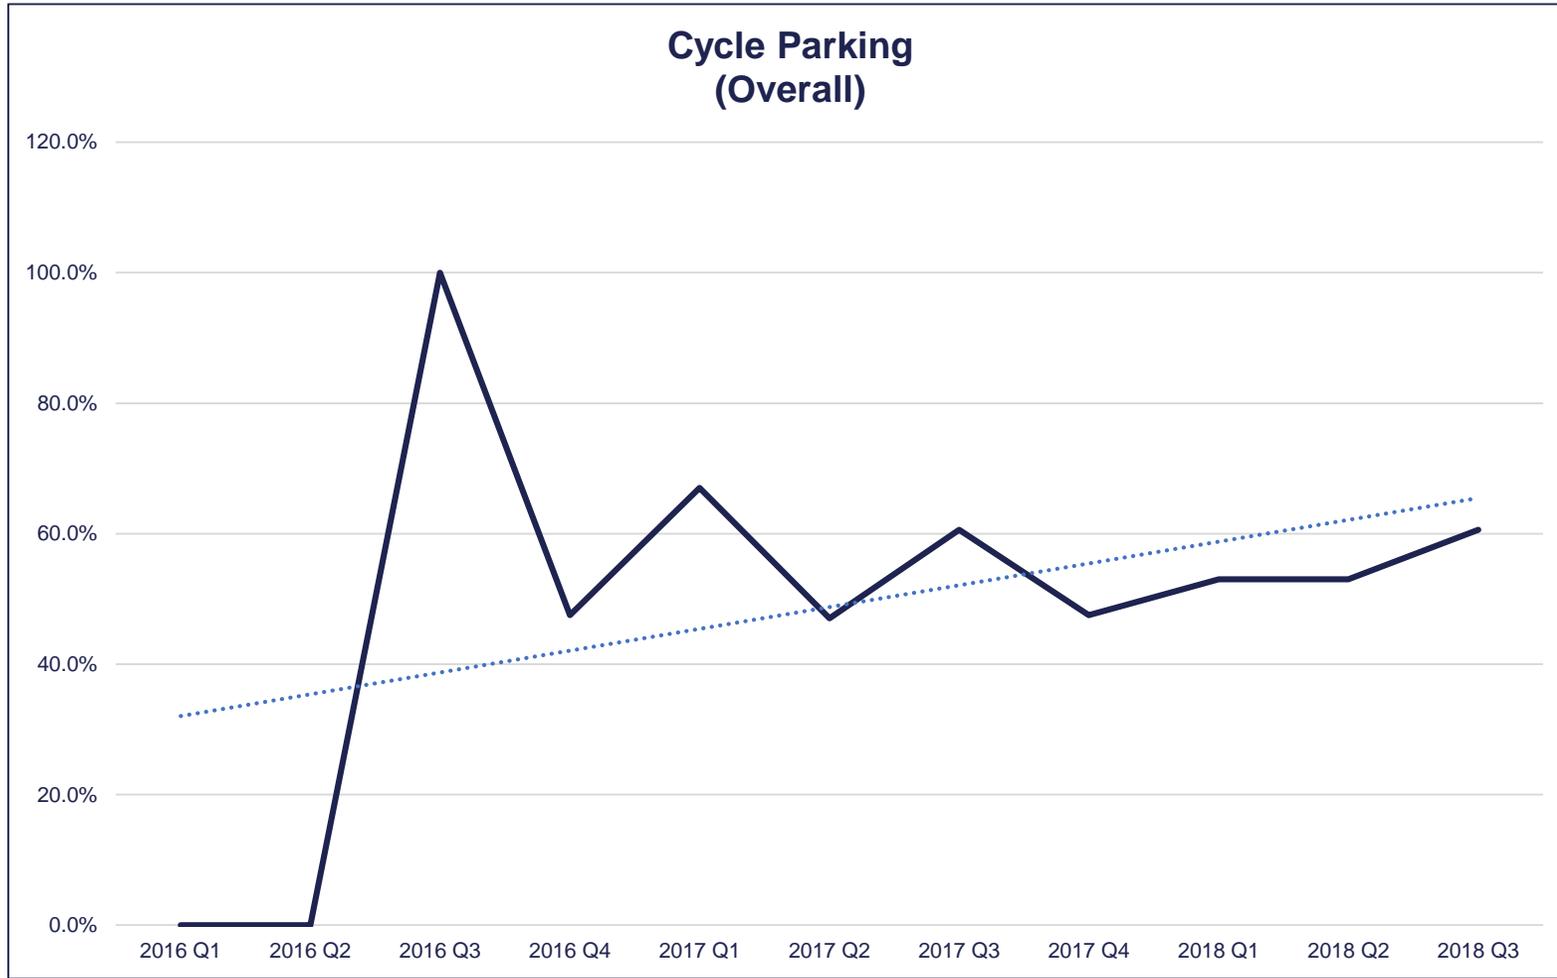

Car parking, as at other stations, is limited, and can cause dissatisfaction for customers. There are other car parks provided locally, however these are busy during the summer months with day trippers.

The car park at Cleethorpes is set to be expanded during 2018/19, however it is expected due to the minimal availability of land, that the expansion will fall short of demand.

Customer Analysis

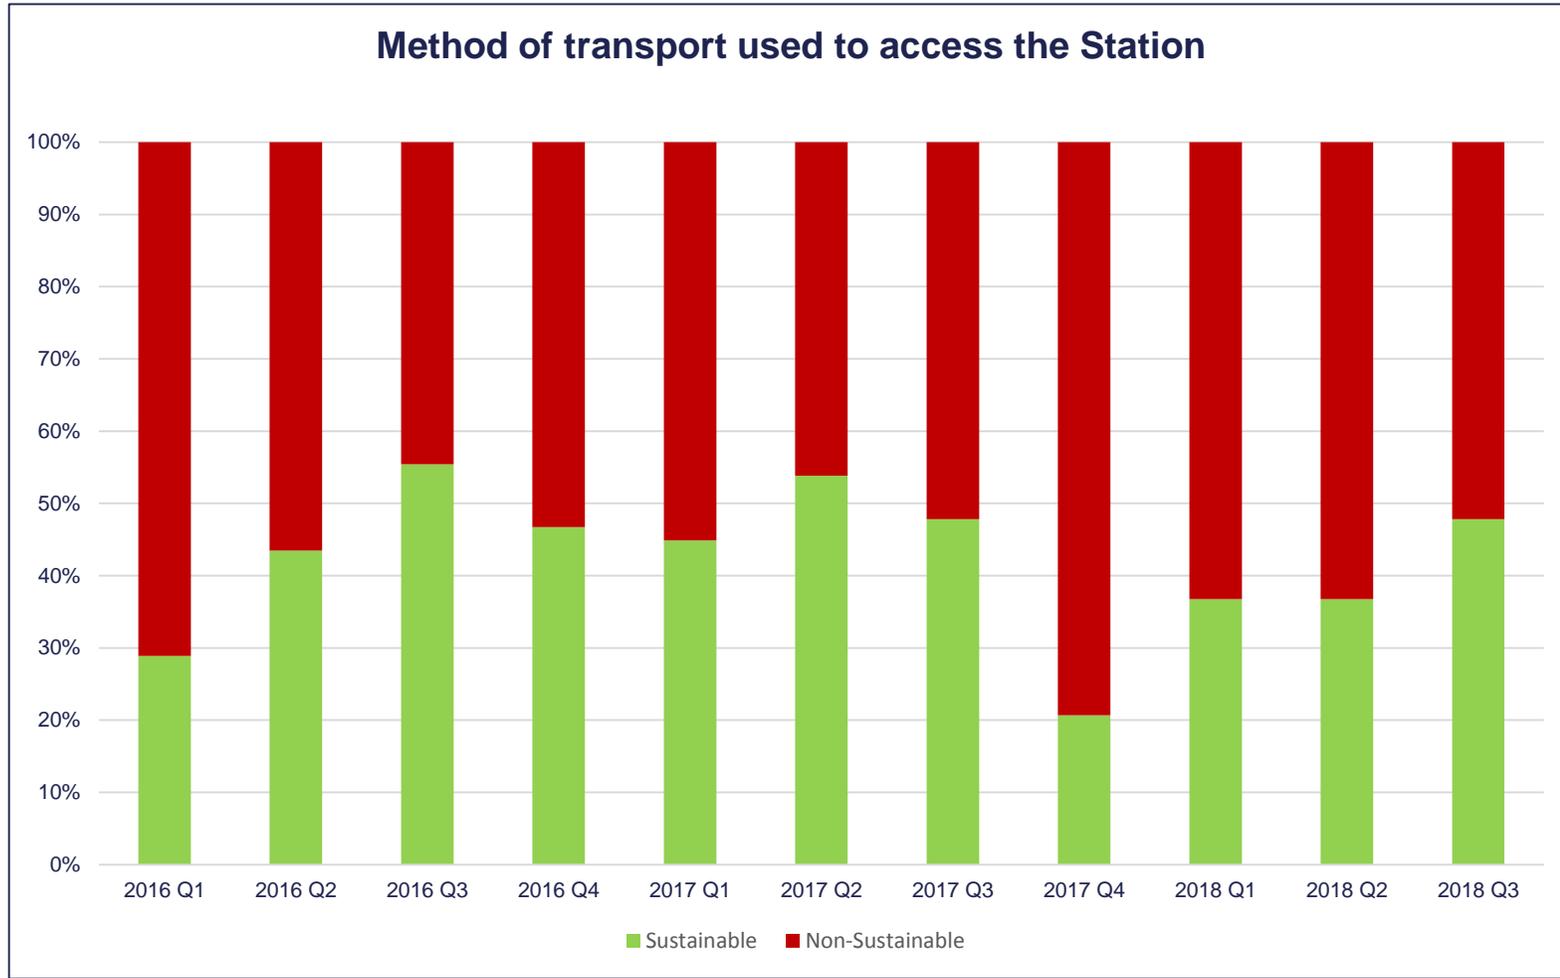

Shadow National Rail Passenger Survey

Cycle parking at the station is basic, with Sheffield stands provided on the concourse, but is set to improve significantly in 2019 with the completion of the new cycle hub located in the former ticket office on platform 1, offering storage, repair and hire services.

Customer Analysis

Shadow National Rail Passenger Survey

This graph assesses the balance of the methods used to access the station.

Sustainable	Non-Sustainable
On Foot / Walked	Motorbike
Bicycle (Parked at or near Station)	Taxi
Bicycle (Taken onto Train)	Car Parked at or near Station
Bus/Coach	Car – Dropped off
Tram/Light Rail	
Underground Train	
Overground (National Rail) Train	

Many customers travelling to/from Cleethorpes do so for leisure. It is primarily residents of the town who access the station by car.

Evaluation

Summary of findings

Cleethorpes is a busy station, attracting high leisure footfall, particularly in the summer months, and acting as a service interchange for customers accessing the Barton branch line.

Access to the station by car is hampered by limited parking. The car park is relatively small, with a high proportion of parking being used by staff based at the Cleethorpes traincrew depot. Staff are encouraged to make use of other modes to get to/from work, and have a dedicated cycle shelter, however the early starts/late finishes due to being an end of line station are off putting to many who would otherwise consider cycling. Car parking is however being addressed by expansion works taking place in 2018/19.

For customers, there is a notable lack of secure cycle parking. The current provision whilst well placed under the station canopy, is not well used, however the imminent completion of the new cycle hub at Cleethorpes station in the old ticket office, with a shop offering cycle hire, repairs and parking.

Local buses are available just a short walk from the station, and provide links to local conurbations, often continuing to Grimsby and to local attractions. The station is located at the opposite end of the town from the amusement parks, but still gives convenient access to the pier within a very short walk.

Whilst there is a taxi rank close to the station, it is not well used, and there is a definite preference towards minicabs which make use of the station car park for drop off/pick up.

Delivery

Objectives, Targets & Actions

Objectives

- Encourage travel to/from our stations by sustainable methods.
- Increase awareness of the facilities which are available at our stations and in the surrounding area to support travel by sustainable modes
- Make improvements to the facilities at our stations to support travel by sustainable modes to provide a consistent standard across all TransPennine Express stations, adopting industry best practice where possible.
- Implement innovative solutions to enhance the experience of travelling to/from our stations by sustainable methods.
- Regularly monitor and evaluate travel patterns to/from our stations to gain an accurate representation of modal share, and use these results to set appropriate targets and monitor the effectiveness of the work being undertaken to encourage travel by sustainable methods.

Targets

- Year-on-Year percentage increase for modal share by sustainable methods

Actions

The actions set out in this Station Travel Plan complement or are in addition to the 400 Franchise Commitments which TransPennine Express will deliver within the 7-year franchise period, each of which is designed to revolutionise the train service and improve the customer experience for rail users across the North. A number of these commitments have already been delivered and are already having a positive effect. Full details of all of the franchise commitments can be found on the Department for Transport website.

Minor Works schemes are also being developed on an annual basis which seek to improve the accessibility of our stations through the delivery of small schemes e.g. installing handrails and height adjustable booking office counters. The specific works for this station are not referenced in this document.

Each action set out in this plan has been written to be SMART

- Specific
- Measurable
- Attainable
- Realistic
- Time-bound

Delivery Action Plan

Theme	Description	Impact	Funding Source	Deadline	Risk	Priority	Update
Public Transport	Engage with local transport operators and local authorities to jointly review timetables to understand what connections are currently available with which services, and identify where changes could be made, or trials initiated.	High	To be determined	Within 12 months	No risk is associated with this activity	High	Further discussions needed
Information	Conduct specific customer surveys at the station at a frequency no less than every 12 months to understand modal share, particularly asking 'have you changed your method for travelling to the station' and 'have you started using train within the last 12 months' to measure modal shift.	Medium	To be determined	Annually	No risk is associated with this activity	Medium	Shadow NRPS utilised for user insight.
Cycling	Conduct cycle audits at a frequency no less than every quarter to monitor utilisation and state of repair, and determine if the facilities are fit for purpose.	Low	None required	Quarterly	No risk is associated with this activity	Medium	DfT are considering how cycle utilisation data is collected and consolidated. TPE will replace this method when determined.
Cycling	Upon completion of the new cycle hub, host a launch event with activities such as security marking or repair sessions, promoting both the facility and the services available.	High	To be determined	To be delivered in line with the completion of the new cycle hub	Lack of attendees	Medium	Awaiting completion of the Cycle Hub
Car Parking	Collect car park utilisation data and monitor this, alongside station footfall figures to ascertain whether a footfall increase is being achieved through car usage or through sustainable modes.	Low	None required	Quarterly	No risk is associated with this activity	Medium	Project delayed whilst car parking facilities are reviewed
Car Parking	Promote car sharing through the advertising of online car sharing databases. Consideration should be given to potential incentives which could be offered.	High	To be determined	Trial to scoped and implemented within 12 months	Promotion of car sharing may promote car usage	Medium	Project delayed whilst car parking facilities are reviewed.
